

The figure below schematically illustrates the general structure and file organization for each dataset in this repository. For instance, *01_RBC-ASHRAE1312* contains the following items:

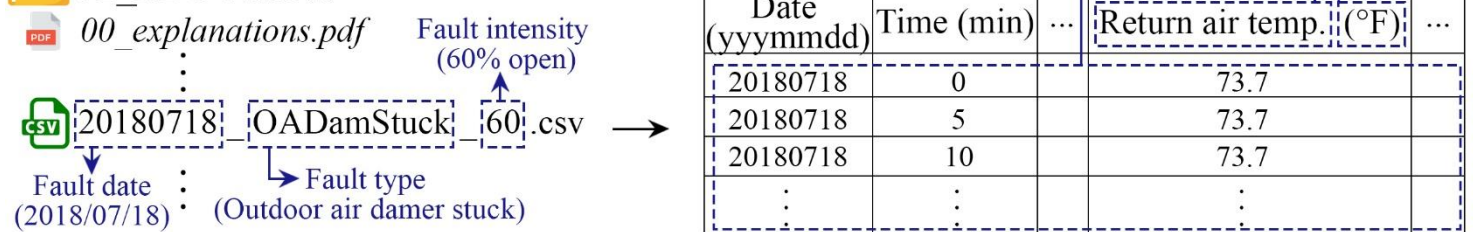

- ***00_explanations.pdf***: Containing all essential details about the dataset, including the list of faults and their injection method, the corresponding air handling unit (AHU) diagram, and system details.
- ***FeaturesNames.xlsx***: Containinig full features' names and their corresponding units.
- Two main folders: The ***Simulation folder*** contains simulated-building data, and the ***Real folder*** contains real-building data. Each of these folders is further divided into three seasonal subfolders:
 - ***Summer***: Fault data collected in the summer season.
 - ***Transition***: Fault data collected during the transitional season (spring).
 - ***Winter***: Fault data collected in the winter season. Each seasonal folder is subdivided into daily folders corresponding to the date of fault injection. For example, in the winter season, the **folder 20080210** contains the data collected on February 10th, 2008. Each daily folder includes three CSV files:
 - ***baseline.csv***: Containing time-series data under fault-free operation for that day.
 - ***[FaultType_FaultIntensity.csv]***: Containing time-series data collected during fault injection (e.g., ***CooCoiValStuck_100.csv***),
 - ***weather.csv***: Containing time-series weather data for that day (e.g., outdoor air humidity, temperature, and wind velocity). In each CSV file, columns correspond to the time-series values of individual features. Column headings contain the abbreviated feature names, with full names and corresponding units provided in *FeaturesNames.xlsx*.

The hierarchical structure, naming convention, and schematic CSV illustrations are provided for all other datasets in the same manner. Please note, since the simulated building datasets (i.e., ***03_RBC-5wk***, ***04_G36-1wk***, ***05_G36-5wk***, ***06_G36-Degrad***, ***07_G36-Cyber***, and ***08_G36-HIL***) share the same list of 114 features, a single CSV schematic is provided to avoid redundancy.
